

# European Union Grants Advisor Computer Service Support (Poland)

IT training helps Poland's young market economy drive European industry towards a knowledge-based future

*"Polish people have gained a great opportunity to take their personal drive and ambition onto the next level in terms of productivity, and make Poland an increasingly important partner in the EU."*

**Witold Ozimek**, Training Division Director, Computer Service Support, Poland

## **Situation**

Among SMEs in Poland, there was a shortfall in IT training for employees. This was due to lack of knowledge around the business value from technology in making day-to-day processes more efficient, and the cost of developing worker skills.

## **Solution**

IT training institutions in Poland, including training centre Computer Service Support, have successfully applied for EU funds via the EUGA programme. They have secured funds in excess of €17.5 million to promote and subsidise courses.

## **Benefits**

- Poles gain assistance in realising their economic potential using information technology.
- Poland's young market economy develops faster.
