

# EUROPEAN UNION GRANTS ADVISOR

## National Grant Funds Development of E-Municipality System

“EUGA has played an important role in the funding for this project. This will allow Geoview to play an important role in providing a fast, effective solution for municipalities across Hungary.”

Zoltán Madár, Director, Geoview Systems

## FAST FACTS »

### Situation

With the European Union listing electronic administration in its Common List of Basic Public Services, Hungarian IT company Geoview Systems recognised the national importance of developing an E-Municipality Solution. The company launched a project to develop a highly efficient information and external relations management tool based on the Microsoft® .NET Framework. The innovative nature of the project prompted Microsoft Certified Partner Geoview Systems to consult the European Union Grants Advisor (EUGA) for help in finding relevant sources of funding. EUGA matched the project's objectives with the requirements of the national INNOCSEKK grant, which supports small and medium-sized enterprises to research and develop new technologies.

### Solution

INNOCSEKK was impressed with the Geoview application—prepared with EUGA's help—and awarded the company €64,000 (U.S.\$86,000) to fund the project. This has allowed Geoview to recruit two new developers to help with the research and development of the e-municipality tool. With IT playing an increasingly important role in the Hungarian public sector, the solution will aid collaboration across organisations, increase the efficiency of municipal administration, and provide easy access to information for local people.

### Benefits

- Two new developers recruited.
- Total project costs covered completely by grant.
- Municipal administration faster and more efficient.
- Enhanced public information for citizens.
